District Code: New

ENERGY-CONSERVING CONSTRUCTION

Because the costs of energy are increasing and the supplies of conventional energy sources are decreasing, the Board recognizes the importance and need for conservation in the construction of new school facilities. The use of energy-conserving measures will serve as an exemplary model for the students and the community.

The use of energy-conserving construction will be of primary importance. The proposed project which contains the most efficient energy-saving plans within an acceptable budget will have highest priority. Energy-saving designs will be documented in the architectural evaluation, and will comply with educational specifications and cost control checklists as determined by the Board upon recommendation from the superintendent.
